

BEEKEEPING STUDY NOTES FOR THE BBKA EXAMINATIONS MODULES 5 6 7 8 V 2

beekeeping study notes for pdf

Beekeeping (or apiculture) is the maintenance of bee colonies, commonly in man-made hives, by humans. Most such bees are honey bees in the genus *Apis*, but other honey-producing bees such as *Melipona* stingless bees are also kept. A beekeeper (or apiarist) keeps bees in order to collect their honey and other products that the hive produce (including beeswax, propolis, flower pollen, bee pollen ...

Pollination is the transfer of pollen from a male part of a plant to a female part of a plant, enabling later fertilisation and the production of seeds, most often by an animal or by wind. Pollinating agents are animals such as insects, birds, and bats; water; wind; and even plants themselves, when self-pollination occurs within a closed flower. . Pollination often occurs within

Pollination - Wikipedia

The honey bee represented in the picture to the right is not very typical of *Apis mellifera mellifera*. I am used to bees that are more black than the one shown here. Although I have a special interest in bees of *Apis mellifera mellifera* strains, I am fascinated by all aspects of all types of *Apis mellifera* honey bees.
