Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

Glossary of research economics - econterms

The economics of global warming concerns the economic aspects of global warming; this can inform policies that governments might consider in response. A number of factors make this a difficult problem from both economic and political perspectives: it is a long-term, intergenerational problem; benefits and costs are distributed unequally both within and across countries; and scientific and ...

Economics of global warming - Wikipedia

In economics and other social sciences, preference is the ordering of alternatives based on their relative utility, a process which results in an optimal "choice" (whether real or theoretical).The character of the individual preferences is determined purely by taste factors, independent of considerations of prices, income, or availability of goods.

Preference (economics) - Wikipedia
